Hemo bioscience App Now Available for Android Devices!

Durham NC. (May 15th 2012) – Hemo bioscience Inc, reports that the characteristics of blood grouping antibodies app is now available on any mobile device running on the Android™ OS.

The Hemo bioscience app was initially launched exclusively for Apple® devices at the 2011 AABB Annual Meeting and CTTXPO. This reference tool allows blood bankers to quickly search for detailed information on antigen frequency occurring in all major blood group systems. Based on feedback provided by leading industry professionals, several changes were made to reflect current immunohematology nomenclature and Version 1.1 of the app was released for both operating systems.

The Hemo bioscience app is available as a free download from iTunes® and Google Play™ or by scanning the QR codes below with any previously installed barcode reader app!
